Conclusion: Tau is the earliest Male name at 33%, the male Tswana culture climbing through 22% to peak at 11%. The earliest Tswana ancestors migrating into southern Africa with their cattle herds around 600AD. They migrated into their current lands in 1500AD under chieftan Kgabo who could occur as early as 22%. Who are the Tswana? Tau is the greek letter, but it was also the Phonecian Taw. It was used as a brand to mark those who lament (confessed) sin (hence T for a convicted thief). Tau is also an early christian symbol called the executioner's cross.

Conclusion: originating in the T linguistic Group. Earliest incomplete comets are at 57% with *M*T (pashto) and *M* (urdu). Peak Comet activity is at 37%. Comet activity drops off until a regurgance of comets at 18% climbing further by 15%. Dropping away and appearing at 6% before declining in activity down to 2% for a minor surge, and then decline to 1%.

Tswana	M	77%	(T; O; E; A; S, G, U, I)
Comet		62%	(T; O; E; A, M; K, I)

GEOGRAPHIC

A Comet Sighting

Around 12 thousand years ago (about 10,000 BC) a comet exploded over the region now known as the Atacama Desert in South America. This occurs just after the migration of the Pre-Tswana subgroup to South Africa (comet event dated to 10,000BC). Assuming existing lands are site of colonization, the approach appears to be from the southern sky (4.6°) over the Tswana in south Africa on atmospheric entry exploding over the Atacama region.

The angle of tilt of planet varying between peak winter and summer from $+15^\circ$ to -15° and passing over the Tswana at -26° suggests an approach from the Oort cloud from between -11° to -37° .
